Kaye ValProbe® RT

Newest State-of-The-Art Technology collecting wireless real-time temperature and pressure data.
Do you need to know in REAL-TIME what’s going on inside your autoclave?

Kaye ValProbe® RT (Real-Time) is a wire-free real-time process validation and monitoring system designed around the measurement and reporting requirements of the most intensely regulated industries.

It is a state of the art validation system design that meets industry and regulatory (FDA / GAMP) requirements for thermal validation. The ValProbe RT system combines high accuracy measurements, automated sensor calibration, an intuitive metro style user interface, and extensive reporting to simplify the complete validation process.

Kaye ValProbe RT is the successor of the widely recognized Kaye ValProbe, the accepted standard in wireless validations systems for over 15 years.

The ValProbe RT family of data loggers provide accurate, convenient, and reliable process measurement for a wide range of pharmaceutical, and medical device applications. The wireless design greatly simplifies monitoring and validation of severe and hard-to-reach environments. See the table below for logger-types and recommended applications.

- Hardened, Dedicated Validation Console
- Asset Centric Data Management Concept
- Intuitive Metro-Style User Interface
- Backward Compatible to existing Validator 2000, Validator AVS, ValProbe, and RF ValProbe
Lifting Real Time Validation to the Next Level

The Kaye ValProbe RT System is a unique design and concept combining a ValProbe RT system with a Validation Console. The console is a rugged, hardened tablet to interface with your Kaye ValProbe RT and legacy hardware. It is pre-loaded with all Kaye software and specifically engineered to Validation tasks only. This concept greatly simplifies software validation and dependency on continuously changing PC’s, Operating Systems, and core loads. The Kaye ValProbe RT offers easy, dedicated and reliable validation.

The Kaye ValProbe RT is intuitive, efficient, and easy to operate - allowing you to focus on the validation, not the technology.

Kaye ValProbe RT Logger simplifies access to hostile, remote, and hard-to-reach environments by eliminating hard-wired sensors, greatly reducing study setup time and associated costs.

- Portable Validation Console Pre-loaded Software
- Dedicated to Validation Tasks
- Simplified Compliance and Easy Validation
- 21 CFR Part 11 Compliant
- Flexible Data Connection Docked – USB / Wi-Fi
- Console can interface with multiple Units
- Stand-Alone Operation
- Reliable Data Safety a Smart Redundancy Concept
- 10 Minute Battery Backup
Applications - Challenges

Applications

- Steam Sterilizer (Autoclaves)
- Dry Heat Sterilizers
- Washer Desinfectors
- Steam in Place (SIP)
- Water Cascade/Fall Sterilizers
- Incubators
- Stability Chambers
- Freezers
- Freeze Dryer/Lyophilisation
- Vessels

Markets

- Pharmaceutical Processing
- Medical Device Sterilization
- Food Processing
- Environmental Monitoring

Challenges

Pharmaceutical industries are faced with increasing operational challenges

- Need for life data during study even in harsh, extreme cold, or hot temperature
- Complex and time consuming data organization
  - Cost and time of validation and re-validation
- Data Integrity – compliance with newest Norms and Standards
- Increased IT security and lock down of portable data
- Continually changing operation systems
  - Hardware compatibility
  - Complex software operation
Wireless Collection of Real-Time Temperature and Pressure Data

- Solutions

Solutions

- Kaye ValProbe RT delivers reliable life data under harsh conditions at high or low temperatures
- Pre-loaded with Kaye Software, the Kaye Validation Console is only dedicated for validation
- The System guarantees ease of use and dedicated reliable validation; allowing focus on validation tasks, not the technology
- 21 CFR part 11 compliant (Data Integrity)
- OS and Hardware controlled and validated by Kaye
- Common Software tools for Kaye Hardware
- Backward compatible to existing Kaye Products
- Elimination of IT control
- Intuitive metro-style touch screen interface
- Simplified Validation
- Asset Centric Data Management concept
Kaye ValProbe RT System

The ValProbe system is designed to provide easy access to process and validation study data. Loggers are programmed via the ValProbe RT base station in combination with the Kaye Console.

The ValProbe RT base station communicates and collects data from up to 50 ValProbe RT loggers. The System is specially designed to be extremely reliable under harsh conditions e.g. 0-5 bar and -85°C to 140°C.

Features
- Life data under harsh conditions via RF during validation study
- RF-Range up to 100 meters
- Temperature Range -85 to 400°C
- Up to 100,000 samples per sensor
- Scan rate down to 1 second
- ValProbe system capacity up to 50 loggers/250 sensors
- Customer interchangeable batteries
- Accuracy up to 0.1°C
- Unmatched battery life

ValProbe RT Base Station

The base station serves as the interface between individual loggers and the powerful ValProbe RT system software. It is used for qualification, calibration, and verification studies.

Its compact design, including a battery backup, makes it well suited for field use or desktop applications.

Features
- Dual antenna technology / allows installation of autoclave antenna
- Compact design for field or desktop operation
- Can operate as standalone system / internal 32 GB memory
- Power supply 100 – 240 V
- Battery backup for up to 10 minutes
- Ethernet network connection
- USB port for high speed RF reader (MOPS)
- LED indicator confirming battery and study condition
- Logger wake-up sound indicator
- Wake-up magnet
- CE, UL certified

The ValProbe RT Base Station is compatible with the entire line of high-accuracy temperature and pressure loggers.
Wireless Collection of Real-Time Temperature and Pressure Data

ValProbe RT Temperature Loggers

Temperature range -85°C to 400°C

ValProbe RT Loggers provide a vast temperature range from -85°C to 400°C. They also provide a single solution for extreme low and high temperature applications, proven for pressure up to 5bar.

RTD technology delivers unrivalled measurement accuracy and the new logger electronic design guarantees long battery life.

Operator programmable sample rates starting at 1 second, allow collection of up to 100 000 data points per sensor.

The antenna diversity concept secures an unmatched RF communication reliability.

Temperature Logger – Rigid

Features
• Temperature range for complete logger: -85°C to 140°C
• Single sensor only
• Sensor length 1.5, 3, 6, 9”
• Sensor diameter 3mm; 0.118”

Temperature Logger – Bendable
Single and Dual Sensor Logger

Features
• Temperature range for logger sensor: -85°C to 400°C
• Single and dual bendable sensor available
• Sensor length 12, 24, 36”
• Sensor diameter 2,4mm; 0.095”

Freeze Dryer Logger

Features
• Temperature range for complete logger: -85°C to 140°C
• Ultra-flat surface sensor
• Surface sensor diameter 32mm; 1.26”
• Optimized surface design also for low vacuum applications
Temperature Logger – Flexible

Flexible Temperature Sensor Logger available as a Single, Dual, or 5-Sensor Logger

Features
- Temperature range for complete logger: -85°C to 140°C
- Single, dual, and 5-channel flexible sensor available
- Sensor length 40"
- Sensor tip diameter 2.4mm, length 25mm; 0,98"

Pressure and Temperature Logger
The ValProbe RT Pressure/Temp Logger provides a wide temperature range from 0°C to 140°C. The loggers are a single solution for pressure and temperature measurements for pressure up to 5bar.

RTD technology delivers high measurement accuracy and the new logger electronic design guarantees long battery life.

The antenna diversity concept delivers an unmatched RF communication reliability.

Features
- Temperature range for complete logger: 0°C to 140°C
- Pressure range 0 to 5 bar, 1mbar resolution
- ¼ NPT connection fitting

Kaye Validation Console
A New Flexible Approach to Validation

The Kaye Validation Console is a state-of-the-art portable and rugged console, dedicated to programming, displaying, reporting, and storing Validation data. The Console is pre-loaded and configured with the suite of Kaye and legacy software. It is customized to specific Validation tasks. The Console offers direct docking and Wi-Fi connectivity with Kaye equipment. The Kaye Validation Console brings about a new approach to tackling your Software Validation.

Validation Console Specifications

Processor
Intel® Core™ Processor

Durability IP54 rated
- Water, Dust and Splash resistant
- Durable Gorilla® Glass
- Rubberized for shock dampening
- Molded Handle to prevent drops

Display
10.4” Display with Projective Capacitive Dual Touch Gorilla Glass

System Storage
mSATA Solid State Drive (SSD)

Integrated Communications
Intel® Centrino® Advanced-N 6235 IEEE 802.11a/b/g/n Wi-Fi®

Separate Docking Station Available

I/O Ports
Docking Connector
USB 3.0 port with rubberized cover

Embedded I/O
On-Board Camera capability of taking pictures with Console

Dimensions / Weight
10.0” x 10.0” x .95”
(256mm x 256mm x 24.3mm)
3.3 lbs (1.50 kg) 1

Battery
Battery life up to 6 hours 2

Backwards Compatibility
Can run with Kaye Validator, Kaye ValProbe Software and IRTDWin

1. Weight represents approximate system weight measured with a 40WHr battery. Actual system weight may vary depending on component and manufacturing variability.
2. Battery life varies by configuration, applications in use, utilized features, and operating conditions. Maximum battery capacity decreases with time and use.
Two ways to connect the Validation Console to Kaye ValProbe RT

1 Docking Mode (Stand-alone)

The console sits in the docking station and connects directly.

The ValProbe RT offers a fully functional docking station with direct access to the ports located on the rear of the unit.

The console battery charges while docked.

2 Network Mode

The Validation Console can connect to a local network by using an Ethernet or Wi-Fi connection.

One validation console can handle multiple Kaye Validation systems simultaneously.

The Kaye Validation Console can establish wireless connections by utilizing any kind of available Wi-Fi infrastructure.

This feature simplifies your daily routine work. You can access live data wirelessly on the console screen. You can start or stop studies and read live data from a Kaye ValProbe RT system in a cleanroom without entering the room.
Kaye ValProbe RT Software

Asset Centric Data Management

The Kaye ValProbe RT includes an intuitive Asset Centric Data Management concept which allows you to store and access your data faster and more efficiently. Each individual process that you validate, whether an autoclave or freezer etc., can be setup and defined as an asset. All files and data related to an asset, such as setups, verifications, or study files, are organized and accessed in one single screen around the basic asset data. It is also possible to upload additional documents such as standard operation procedures or certificates and associate them with the asset. Assets can be sorted and searched by type, location, manufacturer etc. for easy access.

Equipment Assets

With the Kaye ValProbe RT you can define assets for each piece of Kaye Validation equipment. Data such as serial numbers and calibration due dates can be defined. The software automatically notifies the user when calibrations are due. The equipment search function uses the Kaye serial number, that is automatically retrieved as part of the study file, to find related files. Using just one fingertip you can have a list of qualification studies where the equipment asset was used.

- Organized Study Data
- Simplified Data Search
Qualification / Study

The Kaye Validation console can connect to a ValProbe RT system directly through the docking station of the console or via WiFi to the network connected base station.

It enables the user to transfer setups, start studies, and monitor live data or read finished studies. After starting a study, the ValProbe RT base station runs the tasks independently.

One Kaye Validation console can control several Validation Systems in parallel and one Validation system can handle several consoles.

While connected to ValProbe RT the user can see the live data in List or Graphical view, group based calculation, and event messages. Any connected hardware is displayed with a serial number.

Sensor Verification

Kaye the original creator of the Automatic Logger Calibration/Verification feature has included enhancements eliminating manual methods of logger verification resulting in better accuracy. Kaye ValProbe RT is backward compatible with existing Kaye IRTD and calibration baths. The Automatic Calibration/Verification feature minimizes training and ensures accurate and repeatable verifications, all while being well documented.

Select only loggers you want to verify. Defining a calibration setup lets you verify a large number of loggers among all those displayed in equipment assets.

Set the criteria for a logger verification – the ValProbe RT System allows you up to six independent temperature verification points.

The Console displays the entire verification process on one screen. Data fields change color to show the progress of stability and deviation for each logger. A status window lists each step and indicates where the system is in the process.
ValProbe RT Wiring Layout

The Kaye Validation Console includes an extensive and flexible Reporting Tool used to analyze and document your critical Validation studies. The Reporting Tool is a separate application which is seamlessly integrated into the Kaye software. It can be used to analyze and document not only ValProbe RT files, but Validator AVS files also. While offering several new features and enhancements, the Reporting Tool is designed to ensure that the proven and accepted formats of the ValProbe Summary, Detailed, and Calibration formats are maintained. Enhancements to Graphing reports, setup reports, as well as new reports such as ValProbe RT Wiring Layout and Pass/Fail Reports provide faster and more detailed ways of analyzing your data. Reports can be previewed, printed, saved as a PDF, or exported in CSV format.

Configuration Choices

Prior to generating reports the Reporting Tool provides a host of configuration choices:

- Sensors Included in Report
- Sensors Separated by Groups
- Sensor Placement and Description
- Define Cycles (Qualification, Exposure, etc.)
- Calculations (Statistical, Lethality, Saturation, MKT etc.)
- Header/Footers
- Graphing
- Templates
- Pass/Fail Criteria

These features provide you with maximum flexibility to get the data and calculations you require in the correct formats to meet your Validation reporting needs.
Reporting

- ValProbe RT Wiring Layout
- Setup Report
- Calibration Report
- Verification Report
- Graph Report
- Detailed Report:
  - Statistical
  - Lethality
  - Saturation
  - MKT
- Summary Report
- Audit Trail Report
- Pass/Fail Report
Flexible and Compliant

Electronic Signature

Kaye ValProbe RT is specifically designed to enable compliance with FDA 21 CFR Part 11. All recorded data, including calibration offsets, set-up parameters, and administrative tasks are saved in secure, encrypted, tamper-proof electronic records in a format accessible only through the system software. In addition to pre-configured privilege levels, it is possible to explicitly set permissions for each user. With data synchronization to a shared folder it is possible to exchange configuration and data files like your assets, setups, and study files with other Kaye Validation consoles. The Kaye ValProbe RT can synchronize a user database and also merge audit trails of several consoles enabling sorting, searching, and printing of department-wide audit trails, for example, a list of all failed login attempts within a specified time period across all synchronized Kaye Validation consoles. Every console has a unique but customizable machine ID for identification.

User Management

 Policies

Audit Trail Report
System Documentation

Quality Control Documents
Kaye’s quality policy, the ISO 9001 implementation and certificate, and document control standard operating procedures (SOPs)

Development Procedures
Design control and project management SOPs, and functional specifications

Quality Assurance Procedures
Test plan and test case procedures

Release Documents
Quality assurance certification and product release notices

Quality Assurance Test Documentation
Quality assurance test plan and test cases

IQ/OQ Protocol
The Installation Qualification/Operational Qualification Protocol defines a set of procedures to ensure that the Kaye ValProbe RT system is properly installed and operated according to Kaye’s recommendations, and is adequately documented and controlled according to cGMP requirements. The documents are provided in hard copy and on CD, allowing users to modify the documentation to suit specific organizational requirements.

The IQ/OQ Protocol includes the following:
• Installation Qualification document
• Operational Qualification document
• Operational Qualification document - Report
• Standard Operating Procedures document

If you prefer to have IQ/OQ executed by qualified Kaye technicians we also provide Validation IQ/OQ on-site execution.

Validation Reference
The Kaye ValProbe RT system is supported with documentation that verifies a fully validated system, including software, hardware, and firmware. The Validation Reference Binder provides a comprehensive overview of the Amphenol Quality Policy, description of ISO 9001 implementation, and support procedures, and standards for the development, testing, and maintenance of hardware and software. Quality Control documents, Development procedures, Quality Assurance procedures, Release documents, and Quality Assurance test documentation are all included. The Validation Reference is a serialized document, ensuring that registered users automatically receive notification and updates to keep documentation current. The result is a summary of information you would obtain by conducting an audit at Amphenol’s facility—complete, well organized, neatly packaged, and immediately accessible.
Kaye ValProbe RT Onsite Verification

High Accuracy Referencing

Kaye’s temperature calibration equipment is designed specifically to maximize overall system accuracy. Calibration equipment includes temperature references with superior uniformity, traceable intelligent RTD standards, and validation software to communicate with the hardware.

Intelligent RTD Standard

The IRTD Temperature Standard (IRTD-400) is a NIST/DAkkS-traceable instrument that is calibrated over the range of -196°C to 420°C. It is accurate to ±0.025°C over the entire operating range.

Communicating directly with the Console software, the IRTD-400 eliminates the potential for human error, assuring accurate and traceable measurements.

Fast/Accurate Referencing

System performance data is only as good as the accuracy of the baseline measurement and inaccurate measurements have no place in pharmaceutical and biotech processing.

Kaye Baths, Dry Wells, and IRTD Temp Standards offer unparalleled accuracy over a wide temperature range and reliability to meet your validation and verification needs.

Kaye CTR-25
Temp Range: -25°C to 140°C (closed cover)

Verification of up to 10 rigid ValProbe RT loggers

Kaye LTR-150
Temp Range: -30°C to 150°C

Liquid micro bath tub with sensor cage and magnetic stirrer can hold ValProbe RT rigid loggers
To compliment your Validation systems, Kaye offers a complete line of accessories including a storage tray, shipping cases, autoclave antennas, and validation documentation to assist you in meeting your validation requirements.

**Kaye Transport and Storage**

The ValProbe Transport/Storage Tray is an accessory designed to simplify the carrying, storage, and management of Kaye ValProbe RT loggers during use. The ValProbe RT Transport/Storage Tray can accommodate up to 20 Kaye ValProbe Loggers of any type.

**Kaye Shipping Case**

Protect your Validation Equipment and store it safely when not being used.

**Kaye Insulating Canister**

Use the Insulating Canister in combination with minimum the 12” bendable Temperature Loggers for a perfect solution for dry heat applications.

**Performance:**
